

Import Data using Transform Maps in ServiceNow

5. Project Development Phase

This phase covers the actual step-by-step implementation. Screenshots are placed after the corresponding steps.

Step 1: Prepare Sample Data

- Open Google Sheets and create a new sheet.
- Add columns: Employee ID, Name, Email, Department, Location.
- Add at least 8-10 sample employee rows.
- Go to File → Download → Microsoft Excel (.xlsx).

Screenshot reference for the transform/import workflow.

Step 2: Create Custom Table

- In ServiceNow, navigate to System Definition → Tables → New.
- Set Label: Employee Test; Name auto-generates as u_employee_test.
- Save the table.
- Open the table's Form Layout and add fields: Employee ID, Employee Name, Email, Department, Location (all String type).

The screenshot shows the 'Table Transform Map - New Record' form in ServiceNow. The form is for creating a new record for a Table Transform Map. It includes fields for Name, Source table, Target table, and various checkboxes for configuration. The 'Name' field is set to 'Sample Spreadsheet Import', 'Source table' is 'Employee Import [u_employee_import]', 'Target table' is 'Employee Test [u_employee_test]', and 'Order' is 100. The 'Application' is set to 'Global'. There are also checkboxes for 'Active', 'Run business rules', 'Enforce mandatory fields', 'Copy empty fields', and 'Create new record on empty coalesce fields'. A 'Submit' button is at the bottom left. Below the form, there are 'Related Links' for 'Auto Map Matching Fields' and 'Mapping Assist'.

Step 3: Load Data (Import Set)

- Navigate to System Import Sets → Load Data.
- Set Label: Employee Import.
- Choose the Excel file prepared in Step 1.
- Set Sheet number: 1, Header row: 1.
- Click Submit.

Step 4: Create Transform Map

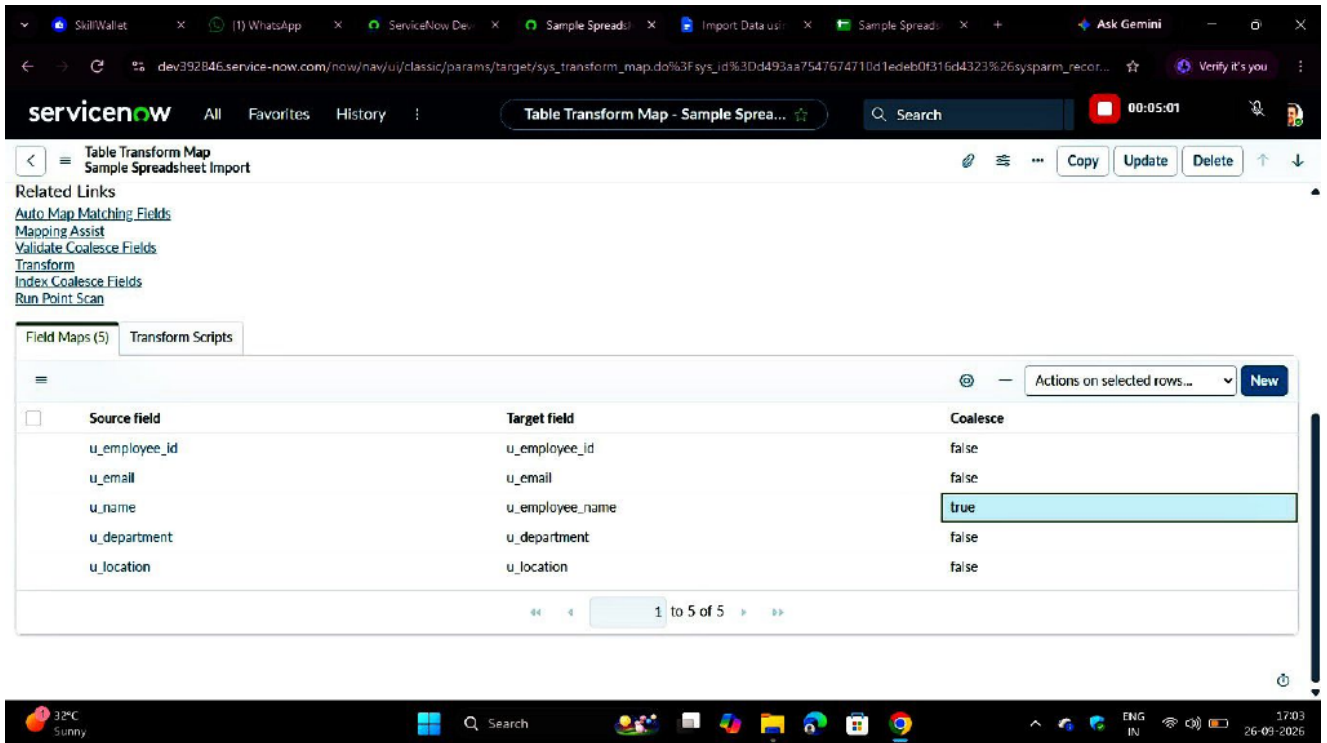

- After the success message, click Create Transform Map.
- Set Name: Sample Spreadsheet Import.
- Source table: Employee Import (auto-populated).
- Target table: Employee Test.
- Click Auto Map Matching Fields.
- Open Mapping Assist and verify/correct each field mapping.
- Save the Transform Map.

Step 5: Run Transform

- Open the Transform Map record.
- Click Transform.
- Select the relevant Import Set record.
- Click Transform.
- Confirm the success message.
- Open the Employee Test table and verify records appear correctly.

Step 6: Configure Coalesce

- Open the Transform Map → Field Maps related list.
- Open the field map for Employee ID.
- Set Coalesce = true.
- Save.

Screenshot: Coalesce configuration in the field mapping list.

Step 7: Test Re-Import (Insert + Update)

- In the Google Sheet, modify 2 existing rows and add 2 new rows.
- Download the updated Excel file.
- Go to Load Data, select the existing Employee Import table, upload the updated file, and submit.
- Run Transform again.
- Open Transform History to view Inserts, Updates, and Ignored counts.
